Period for Reply -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

The suspension letter dated 6-27-06 is withdrawn and the application is reactivated in view of the Board's refusal of the claims in the parent application 09/876,707 over the claims in (6,210,707) (Papahadjopoulos).

Claims included in the prosecution are 33-34 and 36-58.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 33-34 and 36-58 are rejected under 35 U.S.C. 102(e) or (b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Papahadjopoulos (6,210,707).

Papahadjopoulos discloses a method of formulating liposomal compositions which involves combining liposomes with targeting conjugates having a lipid attached to a polymer (PEG) which is attached to a targeting ligand. The targeting ligands include HER family of growth factors, epidermal growth factor and others Abstract, col. 7, line 45 through col. 8, line 59; col. 10, line 65 through col. 16, line 43; col. 22, lines 46-63; Examples and claims). Although Papahadjopoulos does not specifically teach humanized murine antibody, in view of his teachings on col. 14, lines 60-65, that antibodies from animal or human or humanized antibodies could be used, it would have been obvious to one of ordinary skill in the art to use claimed antibodies with a reasonable expectation of success. Papahadjopoulos does not teach cytotoxic agents in claims 51-53; however, since liposomes are known to encapsulate a variety of cytotoxic agents, it would have been obvious to one of ordinary skill in the art to encapsulate appropriate cytotoxic agents, including the claimed cytotoxic agents with the expectation of obtaining the best possible results.
